

Using Jupyter Notebook

During the whole Blockchain module, you will use a small fraction of Jupyter's capabilities. This document sums them up for you.

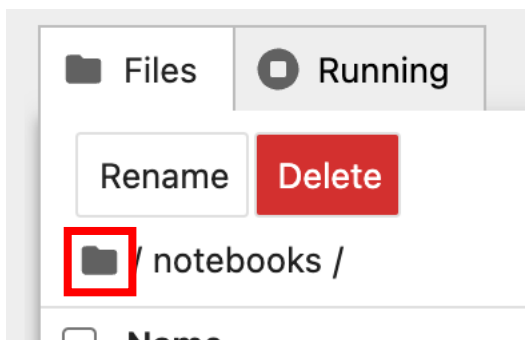

1. Navigating

Directly inside Jupyter Notebook, you can double click on a folder or a file to open it. For example, double clicking on the **notebooks** folder will open it.

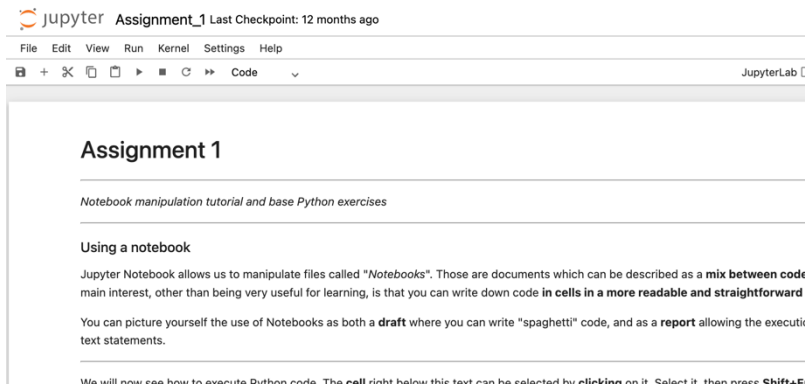

You can click at any time on the little folder icon to go back to the previous folder.

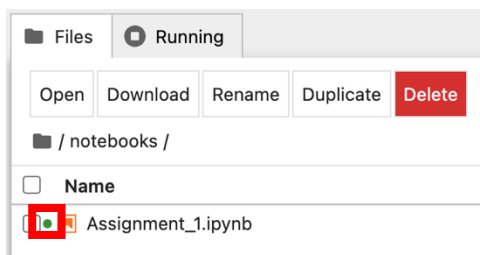

2. Start a Notebook

Double click on a notebook (`.ipynb` files, for example **Assignment_1.ipynb**) to open it.

You should see this in a new tab :

In the Jupyter Notebook explorer, a green dot will now be displayed beside your notebook file to remind you that it is currently running.

You can also see it in the « **Running** » tab, where you can deactivate it if you need.

To learn how to use a notebook, you can now open the **Assignment_1.ipynb** file directly from the Jupyter Notebook interface.
